

Desk Alert

On-Site Security Desk Notification for IP-PBX Deployments

In emergency situations, on-site security personnel are ideal first responders. Unfortunately, security personnel often only learn that a 911 call has been placed when emergency vehicles arrive on scene. To prevent this scenario, 911 Enable's Desk Alert provides enhanced notification to immediately inform security of 911 calls in progress.

How it Works

911 CALL IN PROGRESS

Call Information
Caller ID: 2127175236 Alert ID: 147
Caller Name: John Smith Alert Time: September 15, 2008 8:23:00

Location Information
800 MAIN ST
7th Floor
NEW YORK NY
URL Data: <http://www.xxxxx.com/7thFloor7.jpg>

Notes

Desk Alert Screen Shot

Desk Alert is a software application that is installed on the security desk workstation. When a 911 call is placed, a pop-up window instantly appears on the security desk workstation monitor and sounds an alarm. This ensures that on-site security personnel are promptly notified of all emergency calls within the organization.

Key Features

- Automatic Screen Pop-Up
- Detailed Caller Information
 - Caller's name
 - Location information
 - Callback number
 - URL link that includes additional location-specific information (i.e. a detailed building map or emergency contact list)
- Alarm Notification
- Alert Printouts
- Advanced Logging and Reporting Functions
